Our institution is dedicated to the personal and professional development of students from rural backgrounds, offering a range of UG and PG courses.

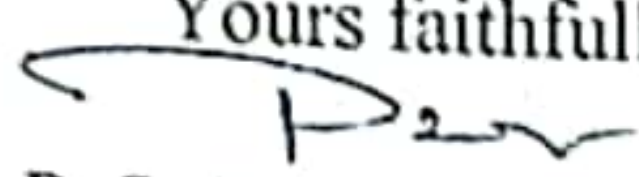

It has been a longstanding practice in our Science and Humanities Department to organize industrial visits for our students every semester, aiming to provide them with practical exposure and industry insights. In line with this, we have planned an industrial visit to VEI Technologies for our 270 first year students and 6 accompanying staff members. The visit is scheduled for two days, with two batches visiting on 20/6/23 and 21/6/23, respectively.

We assure you, sir, that our students will adhere strictly to safety protocols and will not disrupt your regular operations during their visit.

We humbly request your esteemed organization to grant us permission for this industrial visit. We would greatly appreciate if you could confirm the permission through a formal letter or email correspondence.

We look forward to the opportunity for our students to benefit from this valuable learning experience at VEI Technologies.

Natham,
12.06.23

Yours faithfully,

(Dr. P. S. Satheesh Kumar)

Industrial Visit to VEI Technologies, Chennai

Summary Report

Date: June 20th, 2023 (I Batch) and June 21st, 2023 (II Batch)

Venue: VEI Technologies, Poonamallee, Chennai

Purpose: The industrial visit to VEI Technologies aimed to offer students from NPRCET a practical insight into industry operations and various departments. It provided an opportunity for 270 first-year students (90 girls and 180 boys) in two batches, accompanied by six staff members, to gain valuable knowledge about the functioning of an R&D company specializing in web development and software solutions.

Schedule:

- **Departure:** Students were picked up from NPRCET on 20.6.23(I Batch) and on 21.6.23(II Batch) at 9:30 pm and traveled by bus to Chennai.
- **Arrival:** The group reached Chennai at 6:00 am the following day.
- **Visit to VEI Technologies:** From 9:00 am to 12:00 pm, students toured the facility, gaining insights into the company's various departments and operations.
- **Meeting with Director:** Students had the opportunity to meet Mr. Babu Ezhilavan, the Director of VEI Technologies, who provided information about the company's services, including web application development, website designing, e-commerce solutions, and more. They also learned about value-added courses offered by the company in areas such as IoT, Java and Python.
- **Leisure Activities:** After lunch at a nearby restaurant from 12:00 p.m to 1:00 p.m, students visited the planetarium from 1:00 p.m to 3:00 p.m, followed by a visit to the zoo from 3:00 p.m to 5:00 p.m, and a trip to the beach from 5:00 p.m to 6:30 p.m.
- **Return:** The students began their return journey at 8:00 p.m and reached NPRCET on 20.6.23(I Batch) and on 21.6.23(II Batch) at 5:00 a.m the next day.

Outcome: The industrial visit provided students with a practical understanding of industry operations and exposed them to various aspects of web development and software solutions. The interaction with staff and the Director of VEI Technologies enhanced the students' knowledge about the industry and its potential career paths. Additionally, the inclusion of leisure activities ensured a well-rounded experience for the students.

Conclusion: The visit to VEI Technologies was a valuable learning experience for the students, allowing them to bridge the gap between theoretical knowledge and practical application in the industry. The well-organized itinerary balanced educational insights with recreational activities, making it a memorable and enriching trip for all participants.

ABSTRACT

Diabetes is a chronic disease with the potential to cause a worldwide health care crisis. According to International Diabetes Federation 382 million people are living with diabetes across the whole world. By 2035, this will be doubled as 592 million. Diabetes is a disease caused due to the increase level of blood glucose. This high blood glucose produces the symptoms of frequent urination, increased thirst, and increased hunger. Diabetes is a one of the leading cause of blindness, kidney failure, amputations, heart failure and stroke. When we eat, our body turns food into sugars, or glucose. At that point, our pancreas is supposed to release insulin. Insulin serves as a key to open our cells, to allow the glucose to enter and allow us to use the glucose for energy. But with diabetes, this system does not work. Type 1 and type 2 diabetes are the most common forms of the disease, but there are also other kinds, such as gestational diabetes, which occurs during pregnancy, as well as other forms. Machine learning is an emerging scientific field in data science dealing with the ways in which machines learn from experience. The aim of this project is to develop a system which can perform early prediction of diabetes for a patient with a higher accuracy by using machine learning techniques. Here the Support Vector Machine Algorithm is used.

CHAPTER 11

CONCLUSION

In conclusion, the application of machine learning techniques such as SVM algorithm for diabetes prediction has great potential in healthcare, as it can assist healthcare providers in early diagnosis and timely management of diabetes, leading to improved patient outcomes. The use of Support Vector Machine (SVM) algorithm for diabetes prediction through machine learning has shown promising results. SVM algorithm can effectively classify diabetes patients from non-diabetic individuals based on several input variables such as age, BMI, glucose levels, and other health details. Overall, With the growing availability of healthcare data, the use of SVM and other machine learning algorithms will continue to play a vital role in predicting and managing diabetes.

FUTURE WORK

The research has not been completed yet. Only the data collection and machine learning model has been implemented in the Android environment. Prediction Module has implemented in the Android application. Features like recommendation system will be added to the Android application in the future. Preprocessing, statistical analysis, development of the machine learning model have been completed. Current machine learning models for diabetes prediction have shown promising results, but there is still room for improvement. Researchers can explore new approaches to feature selection, data preprocessing, and model training to improve the accuracy of predictions. Diabetes datasets often suffer from class imbalance, where there are more samples of one class (e.g. non-diabetic) than the other (e.g. diabetic). This can lead to biased models that perform well on non-diabetic samples but poorly on diabetic samples. Future work can explore methods to address data imbalance and improve model performance on minority class samples. Machine

ABSTRACT

In most developing countries, provision of basic preventive, promotive and curative services is a major concern of the Government. With growing population and advancement in the medical technology and increasing expectation of the people especially for quality curative care, it has now become imperative to provide quality health care services through the established institutions.

However, these services have not been successful in gaining the faith and confidence of the people because of lack of specialists, facilities and accountability, along with the paucity of resources and non-involvement of the community. Hospital Management System is a simple yet effective management structure. This system acts for the hospitals to manage the affairs of the hospital.

HMS is free to prescribe, generate and use the functioning and maintaining the quality of services.

The project Hospital Management system includes registration of patients, storing their details into the system. The software has the facility to give a unique ID for every patient and stores the details of every patient.

The Hospital Management System can be entered using a username and password. It is accessible either by an administrator. Only they can add data into the database. The data can be retrieved easily. The interface is very user-friendly. The data are well protected for personal use and make the data processing very fast.

CHAPTER - 13

CONCLUSION AND FUTURE ENHANCEMENT

This proposed system paves a new path in the medical industry by bringing in new way of managing hospitals by reducing labour work and digitalizing the process of functioning of the hospital. This eases the process of the hospital administration by reducing the workload of managing the appointments manually. This also reduces the amount of paper and such materials that are used up while the process of booking an appointment and delivery of scan reports. This further increases the efficiency of the managing process of the hospital system. As a part of the future enhancement that is to be brought to this system includes implementation of the digital consulting and remote consulting options which would reduce the patients travelling expenses and further increase the productivity of the hospital management.

ABSTRACT

The Internet of things (IoT) is the system of gadgets, vehicles, and home machines that contain hardware, programming, actuators, and network which enables these things to interface, collaborate and trade information. IoT includes broadening Internet network past standard device, for example, work areas, workstations, cell phones and tablets, to any scope of generally stupid or non-web empowered physical device and ordinary articles. Installed with innovation, these gadgets can convey and connect over the Internet, and they can be remotely observed and controlled. Not with standing causing flame and blast dangers, holes canslaughter vegetation, including huge trees, and may discharge amazing ozone harming substances to the environment. Keywords: IOT, MQ5 sensor, Arduino module, GSM networks.

CHAPTER 11

CONCLUSION AND FUTURE WORK

This work sets out the problem of LPG leakages that have resulted in numerous fatal casualties as well as damages to properties worth billions of dollars. As such a device that is capable of detecting such leakage and shutting off the gas supply was designed and simulated successfully with the aid of Proteus. The device is able to sense the leakage of LPG through a highly sensitive MQ-6 gas sensor and with the aid of a microcontroller activate a buzzer which buzzes to alert anyone nearby of leakage. An SMS with information "LPG Leakage Detected" is sent from the SIM900A GSM Module as a backup to alert the appropriate authority of leakage. Also, supply is shut down by the solenoid valve unit under one minute to avoid wastage and possible accident.

Future Work

In the future implementation we are going to provide voice implementation that will guide the user by audible sounds. Further it can be provided with emergency alerts in which we can send messages to the close ones. For this function GPS tracking should be implemented in this plug-in device.

This design should be taken up, funded and implemented by any individual who has an interest in the project, as it has a great potential of mitigating against accidents associated LPG leakage and a weighing scale be incorporated into the design to measure the amount of gas used or left in the gas tank or cylinder.

In this proposed model we want to achieve two aspects:

1. To design an embedded system:

In this we are going to use the AVR microcontroller that control all the module and things.

2. Accident avoiding feature:

ABSTRACT

ATM or Automated Teller Machines are widely used by people nowadays. Performing cash withdrawal transaction with ATM is increasing day by day. ATM is very important device throughout the world. The existing conventional ATM is vulnerable to crimes because of the rapid technology development. A total of 270,000 reports have been reported regarding debit card fraud and this was the most reported form of identity theft in 2021. A secure and efficient ATM is needed to increase the overall experience, usability, and convenience of the transaction at the ATM. In today's computer vision is advancing at a breakneck pace. The recent progress in biometric identification techniques, including finger printing, retina scanning, and facial recognition has made a great effort to rescue the unsafe situation at the ATM. Specifically, the goal of this project is to give a computer vision method to solve the security risk associated with accessing ATM machines. This project proposes an automatic teller machine security model that uses electronic facial recognition using Deep Convolutional Neural Network(DCNN). If this technology becomes widely used, faces would be protected as well as their accounts. Face Verification Clickbait Link will be generated and sent to bank account holder to verify the identity of unauthorized user through some dedicated artificial intelligent agents, for remote certification.

CHAPTER 11

CONCLUSION

11.1 Conclusion

Biometrics as means of identifying and authenticating account owners at the Automated Teller Machines gives the needed and much anticipated solution to the problem of illegal transactions. In this project, we have developed to proffer a solution to the much-dreaded issue of fraudulent transactions through **Automated Teller Machine by biometrics and Unknown Face Forwarder** that can be made possible only when the account holder is physically or far present. Thus, it eliminates cases of illegal transactions at the ATM points without the knowledge of the authentic owner. Using a biometric feature for identification is strong and it is further fortified when another is used at authentication level. The ATM security design incorporates the possible **proxy usage of the existing security tools (such as ATM Card)** and information (such as PIN) into the existing ATM security mechanisms. It involves, on real-time basis, the bank account owner in all the available and accessible transactions

ABSTRACT

It is not very unusual for anyone to have a break down with their car at least once. Now, if the break down happens in a familiar place or a well-populated one, it is easy to inquire about a service centre or a mechanic who can come to our rescue. But many of these unfortunate incidents like highway journey it happens in the most possible remote locations without a soul nearby to help. It is in these situations our proposed app is very useful to people. The project presents an approach to solve the problem in vehicles repairing / services in emergency situations at highway. Collecting the information reports from all vehicle service / repairing shops in separate area / district. In that emergency period user's location and the problem is send then nearby shops mechanic quickly come to this place and solve the problem and also available to payment for this service via card / cash. The project includes some algorithm to assign geo graphical (Navigation) algorithm used on particular lace will be track. In our daily life we don't know when and where we get stuck on the road and we don't know where we are and we also won't be able to find the nearest mechanic location. This project targets to develop an android application that will help the user to register through installing the application and can get access to the nearest mechanics location and contact him personally this uses the internet and messages permissions to go on with the application.

CHAPTER – 11

CONCLUSION

Car being an important part of our daily life needs to be regularly serviced for efficient working. Automation with IOT makes the whole experience of car servicing smart and fast. Above proposed system not only manages real-time service of our car but also provides necessary data and predictions to help us determine the time for next service and approximate cost. Though this system adds to the servicing cost, but it prevents service centers from charging more and makes customer aware about all the modulations done on car. All in all, this system saves time and money of customer. Technologies like IoT and RPA has fundamentally altered the way we live and work. It has made our life easier. This system increases the efficiency of our car and also reduces customer's effort at the same time in highways.

The proposed paper shows the flow, structure and working of the E-Mechanic Service EMS is user friendly i.e. easy to use in highways. It is free of cost on android store. Thus, it is time a time saving as well as cost efficient application. So, we can conclude that the proposed system can be used to reduce human efforts and luxuriate human lives, hand in hand, with the modern technology.

ABSTRACT

Transmission and storage of medical data using cloud-based Internet-of-health-systems (IoHS) necessitate important prerequisites, such as secrecy, legitimacy, and integrity. The system is developed encryption/decryption scheme that can be applied in e-healthcare, or IoHS, for the protection of medical images. Cloud is a new technology that is developed to reduce the storage area and cost of storage. E-Health Care having same images share a common storage area and that images can be fetched whenever needed. The proposed system explores the multiple medical images are encrypted and decrypted. The medical data manager encrypts the medical images and stored in cloud increasing exponentially day by day. An Admin generate a secret key for each and every image. And Health care provider will decrypt the encrypted images from cloud. The only way to reduce the time for medical department is multiple medical images encrypted and decrypted at a time and elimination of repeated images in cloud.

CHAPTER 11

CONCLUSION AND FUTURE ENHANCEMENT

I conclude that, medical image encryption scheme that can integrated in cloud-based internet-of-health systems (IoHS). An input parameter besides the medical image and the secret key unlike those encryption algorithms based on one-time keys. The latter has the advantage that it permits controlling the encrypted image without affecting the secret keys. Thus, my system possesses multiple advantage, including improved encryption quality, performance, and robustness; and also secure and speed encryption of multiple images using key. This has been documented using various experiments and various test medical images. Additional companion with state-of-the art encryption scheme using benchmark images (both color and greyscale) highlighted the high effectiveness and robustness of the proposed scheme to prevent many existing cryptography attacks and cryptanalysis techniques.

For our future work, we will investigate how to achieve the same functionalities using another algorithm with the same security guarantee without independent key servers.

ABSTRACT

The website hosts the fashion dresses to be sold in the online. Every Seller can register their information and their clothe details in the site to sale using this application. Administrator creates the products types and items and uploads it on the site to sale. This system allows the small scale clothe merchants and familiar middle class clothe merchants can register their products to trade their clothes through this online application. Using this portal, customers who are surrounding the particular city can purchase clothes online from specified shops which are nearby their places and which are familiar shops in the city. So customers get the delivery of clothe items from the specified shop quickly. All the uploaded products in the site are available online. Any user visits the site can view the products and can purchase online. The products are displayed category wise so that the search of the product is easy. Users can select the products from the site and can add in their account. Then on finishing the purchase of items from the site, user needs to confirm the products purchased. Then the order is send to the site.

CHAPTER – 11

CONCLUSION AND FUTURE ENHANCEMENT

This online shopping helps the user to shop fashion clothing for men, women and children through online. So that the user is not needed to leave his/her house for shopping. The invention of the new system is an achievement since it satisfies the requirements of the users. Therefore it is time saving and easier to access. Small clothe merchants surrounding the city can register their products for online sales and getting benefits to both clothe shop merchants and customers who are in the same place.

Even some small clothe merchants sell the high quality of clothe with affordable price, they don't get popular and they could not get the right revenue from their business. These kinds of small clothe merchants surrounding the city can register their products for online sales and getting benefits to both clothe shop merchants and customers who are in the same place. In future, it can be implemented securely with help of wallet code or quick response code to verify and approve legitimate and honest users only. Based on friend recommendation, customer's can decide to select the shop and purchase the items from recommended shops only.

The future enhancement of our project is to make an online payment process like adding the UPI, Banking, etc.

ABSTRACT

Accident detection using an Android application is an innovative and efficient approach to identify and report road accidents in real-time. The application uses various sensors and algorithms to detect the occurrence of an accident, such as sudden changes in acceleration, orientation, and speed. Once an accident is detected, the application automatically sends an alert to the emergency services, providing the precise location of the accident and other vital information. Accident detection and alerting the respective contacts using an Android mobile application is an innovative and potentially life-saving technology. This application will detect whether the accident occurred or not by analyzing the movement of the phone using the accelerometer, or by detecting a user input signal such as pressing the volume button or by clicking the help button on the application. Once an accident is detected, the app can alert emergency services and pre-selected contacts with the user's location and any relevant information. The implementation of this system requires the integration of several technologies, such as GPS, accelerometer, gyroscope, and Bluetooth. Once an accident is detected, the application will send an alert to emergency services automatically with the user's location, any relevant medical information, and an option for the user to contact emergency services directly.

CHAPTER 10

CONCLUSION AND FUTURE ENHANCEMENT

10.1 Overview

The use of an android mobile application for accident detection and informing emergency services and pre-selected contacts can significantly improve response times and reduce the severity of injuries resulting from accidents. This application can detect accidents through shaking the phone, pressing the volume button, or clicking a help button on the application and can transmit real-time location information to emergency services and pre-selected contacts. The application's user registration module allows users to create a personalized account, while the enroll emergency contact module allows users to enroll their emergency contacts, including family members, friends, or healthcare professionals. The alert feature module triggers an alert to emergency services and pre-selected contacts when an accident is detected, while the notification module sends notifications to the user and emergency contacts when an accident is detected or when the alert feature is activated. The application's feedback module allows users to provide feedback on the application's performance and reporting any issues or bugs. Finally, the application's user education module provides education and training to users on how to use the application effectively.

10.2 Future Enhancement

This mobile application is helpful in future when any problem arises in travelling or any kind of situations. As the technology emerges it is possible to upgrade the system and can be adaptable to desired environment because it is based on object oriented design, any further changes can be easily adaptable. Based on the future security issues, security can be improved using emerging technologies.
